                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGGGGAACTGGTGGTACAAAGCCAGGGGCTCAGTTAGTGTTAAGTCCATCAAGTGAGCAG 48478
                                                                                                                           requests: clonerequest@sanger.ac.uk

n Oct 1, 2000 this sequence version replaced gi:9931221.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.bearkeley.edu.

Em: RMBL; SW:, SWISSPROT: Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6

Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6

RP3-472A9 is from the library RPCI-3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/
VECTOR: pCYPAC2

IMPORTANT: This sequence is not the entire insert of clone RP3-472A9 it may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP3-472A9 is at 85195 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24927 a

                                                                                                                                                                                                                                                                   The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors \mathbf{f}_{i} the construction of transgenic plant and animal cells -

Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the productton of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as

The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, lumnune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated

                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 3'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in complication. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs aesily without any specialised methods. AAH03166 to AAH13628 and CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CDNAs and AAH13629 to AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent inventions.

AAX20500-21243 represent polynucleotide sequences from the genome Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidu infections, particularly syphilis. They can also be used for detections experience to Borrelia infections in animals, and for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis

                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                          The present sequence is the complete nucleotide sequence of the CagI C locus, including the true 5'-terminus of CagI. The sequence was CC constructed using overlapping clones (one of which also overlaps with CC the CagA region). The CagI region contains clusters of putative open CC reading frames (ORFS) with different polarities. The putative ORFS for CC this region are shown above. It is hypothesised that some of these ORFS for CC may encode exporter molecules with homology to the ptl genes of CC may encode exporter molecules with homology to the ptl genes and CC Salmonella pertussis and VIR B4 genes of Agrobacterium tumefaciens and CC salmonella genus. The absence of the CagA gene in the type I strains is CC associated with the absence of the CagA gene in the type I strains is CC fragments and encoded proteins are used in the diagnosis of H. pylori (esp. H. pylori type I strain) infection in an individual and in vaccines CC claimed) for the treatment of H. pylori infection associated with e.g.

                                                                                                                                                                                                                                                                                                                                                                              1547
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 represent human anino acid sequences; and AAH36246 to AAH3633 represent human anino acid sequences; and AAH3629 to AAH3632

                                                                                                                                                                                                                                   CC gene from the non-typeable Haemophilus influenzae (NVHi) strain ky.

CC Hia genes and proteins have antiinflammatory, auditory and antibacterial contivities, and can be used in the production of a vaccine. An excine and composition comprising an Hia gene, a polypeptide encoded immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing contection against disease caused by Haemophilus strains in a context of the context preferably a human. An Hia protein is useful as an excine context preferably a human. An Hia protein is useful as an experimental context preferably a human. An Hia protein is useful as an experiment of the generation of diagnostic reagents. Hia context of the immunogens, and in the generation of diagnostic reagents. His context is useful for treating diseases caused by the infection of Haemophilus confidence as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours hip recovery of the protein compared to the low recovery of native protein from Haemophilus confidence species. A truncated protein has a significantly higher amount of recovery than a full-length protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to olfactory receptors (AAG98432-AAG98609) and the genes encoding them (AAH83879-AAH84131) including pseudogenes of 10 primate species, mouse and human. The nucleic acids and receptors may be used in the food processing industry (e.g. for the detection of aromas, quality control and sample analysis), in perfumery (e.g. for the analysis or comparison of perfumes) and in the environment (e.g. for the detection of toxic substances and/or trapping of odours).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This DNA sequence comprises Mycobacterium bovis BCG deletion Sequence BCGdelta3. A specific genetic deletion of this region C results in an avirulence phenotype of the mycobacterium. 2 Other C deletion regions (see AAT3535 and AAT33536) have also been detected. C rediction involved screening a BCG cosmid library with a CC radiolabeled probe obtained following DNA subtraction between CC virulent Mycobacterium tuberculosis H37Rv and avirulent BCG.

CC The deletions provide useful markers for the identification of an CC avirulent, or a virulent, mycobacterial phenotype. Determination CC avirulence requires the detection of the presence or absence of the deletion; the deletions are detected either by detecting the CC presence or absence of deletion junctions (see AAT33538-46), or by CC detecting the presence or absence or absence of the sequences contained within CC the deletion. Deletion polypeptides are used as components of CC immunological assays and in vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes the isolation of a novel human aminopeptidase P (AmP). This protein is used to produce recombinant AmP and can be used for gene therapy for treating AmP-deficiency conditions. Its fragments are used as primers and probes to identify patients with homozygous and heterozygous AmP deficiency, including prenatal diagnosis (patients defective in AmP are at risk of developing angioedema if treated with angiotensin-converting enzyme inhibitors), also as antisense inhibitors in cases of excessive AmP expression. The product of the invention is also used to identify AmP-expressing sequences in other animals and to generate transgenic animals, and comparisons of genomic sequences are used to detect mutations. AmP inhibitors are potentially useful as antihypertensive agents and to prevent or treat arterial (re)stenosis or atherosclerosis. The structure of AmP is used to design synthetic substrates, e.g. for use in AmP assays. AmP, which hydrolyzes N-terminal inion acids, to degrade to degrade industrial protein feeds to free amino acids, to degrade proteinaceous wastes, as additives in enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary controlled to the complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC conjugenmentary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 5'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 1 least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB93893 represent human cDNA sequences; and AAH13628 and CC AAB93893 represent human cDNA sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
